Profile

- Designed responsive web pages using HTML, CSS, and JavaScript, applying accessibility standards to enhance usability across devices and user groups.
- Connected APIs to front-end applications to retrieve external data, enabling dynamic content updates and improving user interaction.
- Built a RESTful API from scratch, including setting up a local server, connecting to a database, managing routes, handling responses, authenticating users, and securely managing connection and configuration information.
- Maintained code versions using Git and GitHub, ensuring consistent collaboration and version control across development stages.
- Analyzed business problems and wrote, tested, and debugged short programs to deliver functional software, improving operational efficiency.
- Developed Python scripts and SQL queries to automate data handling and perform complex joins, resulting in faster data processing and improved database performance.
- Currently completing a diploma in Application Development and Delivery at RRC Polytech, gaining skills in all aspects of software development life cycle including design, building, testing, development and maintenance.

Technical Skills

Languages: Python, JavaScript, TypeScript.

Web & Frameworks: HTML, CSS, Node.js, Express.

Databases: SQL, Firebase Firestore.

Tools: Git, GitHub, VS Code, Postman, AWS (Lambda, DynamoDB, API Gateway, S3).

Operating Systems: Windows, Linux, macOS.

Education

Applications Development and Delivery Diploma
RRC Polytech

Jan 2025 – May 2027
Winnipeg, MB

- Gained experience in troubleshooting, application support, and writing clean, maintainable code, completing academic projects.
- Developed skills in Agile practices, contributing to software development and technical support.

Electrical Applications
MITT

Jan 2020 – Jan 2021
Winnipeg, MB

Academic Projects

Community Support Tracker Project

Dec 2025

Front-End Development | RRC Polytech

Winnipeg, MB

- Developed a responsive web application to manage community engagement activities, including event signups, donations, and volunteer tracking, with a focus on usability and accessibility.
- Built event registration form and participant dashboard using HTML, CSS and JavaScript, implementing form validation, dynamic error handling, and ARIA accessibility standards. Developed local storage-based persistence for the signup data for participant records. Created real-time dashboard metrics and dynamic tables to track roles and signups.
- Delivered a fully functional event signup module with responsive design and accessibility compliance. Improved user experience through dynamic handling and error handling. Received an A+ grade for both the project and course.

Pixell River Financial Account Project

Dec 2025

Intermediate Software Development | RRC Polytech

Winnipeg, MB

- Developed a robust financial system capable of managing multiple account types, performing transactions, and notifying clients of changes, while adhering to object-oriented principles and design patterns.
- Designed and implemented different account classes using inheritance and polymorphism. Applied Observer pattern for real-time notifications and Strategy pattern for dynamic service charge calculations. Built user interface components for account details and client lookup, for seamless transactions. Developed data management utilities to load and update client/account data from CSV files and simulate email notifications.
- Delivered a fully functional financial application supporting deposits, withdrawals, and account management across multiple account types. Received an A+ grade for both the project and the course.

Traffic Offence API - Capstone Project

Back-End Development | RRC Polytech

Apr 2026

Winnipeg, MB

- Collaborated on a team-built RESTful API using Node.js, Express, and TypeScript, backed by Firebase Firestore, to manage traffic tickets, payments, and appeals with consistent validation and response handling across the application.
- Owned the payments module end-to-end: designed and implemented CRUD routes (GET, POST, PUT, DELETE) for my endpoint, applied Joi schema validation, integrated JWT-based authentication middleware, and enforced role-based access control.
- Documented all payment endpoints using OpenAPI/Swagger annotations enabling auto-generated interactive API docs: used Git and GitHub for version control and collaborative development throughout the project.

Inventory App – Cloud Infrastructure Project

Apr 2026

Cloud Infrastructure and Development | RRC Polytech

Winnipeg, MB

- Built a serverless cloud inventory system on AWS, using DynamoDB, Lambda, API Gateway, and S3 into a fully functional application supporting CRUD operations across multiple locations.
- Designed DynamoDB schema with composite key and GSI for efficient queries..
- Configured GitHub Actions CI/CD for automated deployment and linting.

Additional Experience

Office Administrator

Dec 2021 – Jul 2024

Immanuel Fellowship Church

Winnipeg, MB

- Managed communications, scheduling, and meeting logistics for church leadership, demonstrating strong organizational and time management skills essential for agile environments.
- Interacted with clients and service providers, building communication and problem-solving skills essential for cross-functional collaboration.
